

Anuj Verma

Full Stack Data Engineer · Madhya Pradesh, India · anujverma1062002@gmail.com · +91 62667 54858

PROFILE

STATUS	Full Stack Data Engineer at TCG Digital Solutions, Kolkata
SKILLS	Python, TypeScript, JavaScript, C++, FastAPI, Node.js, Express, React, Kafka, Airflow, PySpark, pandas, ElasticSearch, MariaDB, Redis, SQLAlchemy, Docker, Kubernetes, AWS S3
INTERESTS	Software Development, Distributed Systems, API Development, Data Engineering, Data Warehousing, ETL Processes, Data Lakes, Data Analysis, Data Quality, Database Design, Cloud Platforms, DevOps, Automation, Scalability
ACTIVITIES	Anime, Web Series, Football, Gym, Competitive Coding

SUMMARY

Adaptable, detail-oriented problem-solver with strong analytical skills, passionate about automation, scalability, and AI-driven solutions. Skilled in optimizing performance, mentoring teams, and driving projects to success. Quick learner, committed to innovation and high-quality execution.

SYNOPSIS

- 2+ years experience in the tech industry, 3+ years in full-stack development.
- Experience designing and building scalable web applications, real-time data processing systems, and automation tools.
- Build data platforms end to end: scheduled ingestion from heterogeneous sources, idempotent pipelines, layered service architectures, and container orchestration across Docker Swarm and Kubernetes.
- Shipped real-time alerting, AI-powered data recognition, and live-monitoring platforms with secure, role-based access.

EXPERIENCE

02/2026 - Current	Full Stack Data Engineer	TCG Digital Solutions, Kolkata
- Built the ingestion layer for a transformer condition-monitoring platform, moving 100K–1M records daily from six source systems — plant historian, ERP, permit and incident APIs, and two SQL databases — for a production fleet of 50–200 transformers, replacing condition reporting previously compiled by hand. - Made every ingestion idempotent by deriving each destination identifier from record content, so overlapping windows and manual backfills upsert instead of double-counting — removing the de-duplication step entirely and making the daily schedule safely restartable after an outage. - Designed the domain rules governing which stored measurements remain valid after an asset is refurbished, preventing trend charts from being plotted across an equipment change, and covered the data services with 182 test functions. - Built pluggable Docker Swarm and Kubernetes deployers behind a single interface for an event-pipeline platform running in production across multiple teams, letting a pipeline drawn in the browser deploy to either orchestrator from one specification and replacing hand-written deployment files. - Cut reconciliation cost from O(flows) to O(orchestrators) API calls per cycle — about 3 calls per cycle instead of 3 per flow per cycle — using batched cluster-wide reads, and replaced delete-and-recreate restarts with zero-downtime in-place rolling restarts on both orchestrators.		

- Developed alert notification system using WhatsApp Cloud API as microservice, reducing incident response time by 40% through real-time alerts.
- Implemented Python script for handwritten form recognition using LLM Whisperer and Google Cloud Vision API, achieving 85%+ accuracy in extracting handwritten text.
- Designed data streaming pipeline for live camera feeds with AI-driven violation detection, processing 100,000+ events daily with low-latency event handling.
- Built web service for live camera visualization and violation detection, enhancing security monitoring by 30%, with role-based access control and real-time processing.
- Containerized services using Docker, improving deployment efficiency and enabling 50% faster onboarding for new developers.
- Managed SQL database operations with MariaDB and SQLAlchemy, optimizing data retrieval, tracking millions of violation records, and reducing query execution time by 60%.

- Designed a web app to automate CRUD app and Dockerfile creation, reducing manual development efforts by 70% through user-provided specifications.
- Developed a versatile JSON editor tool for parsing and validation, improving data accuracy, and enabling 50% faster web app generation using NPM.
- Built a robust backend to manage user accounts and app generation, supporting over 1000 user-generated apps with optimized data storage and processing.

ACCOMPLISHMENTS

- Cleared JEE Mains and JEE Advanced, secured admission to IIT Kharagpur.
- Won Silver in Inter IIT Tech Meet 10.0 in 3D Animation.
- Completed Hacktoberfest 2023, earned tree plantation under name in African forest.
- Won Gold in Illumination competition for RP Hall (cultural event at IIT Kharagpur).

ACTIVITIES AND HOBBIES

- Passionate about anime and web series.
- Cat lover with a pet cat.
- Enjoy playing football and hitting the gym regularly.
